THE COMPANY

ESTABLISHED IN '96

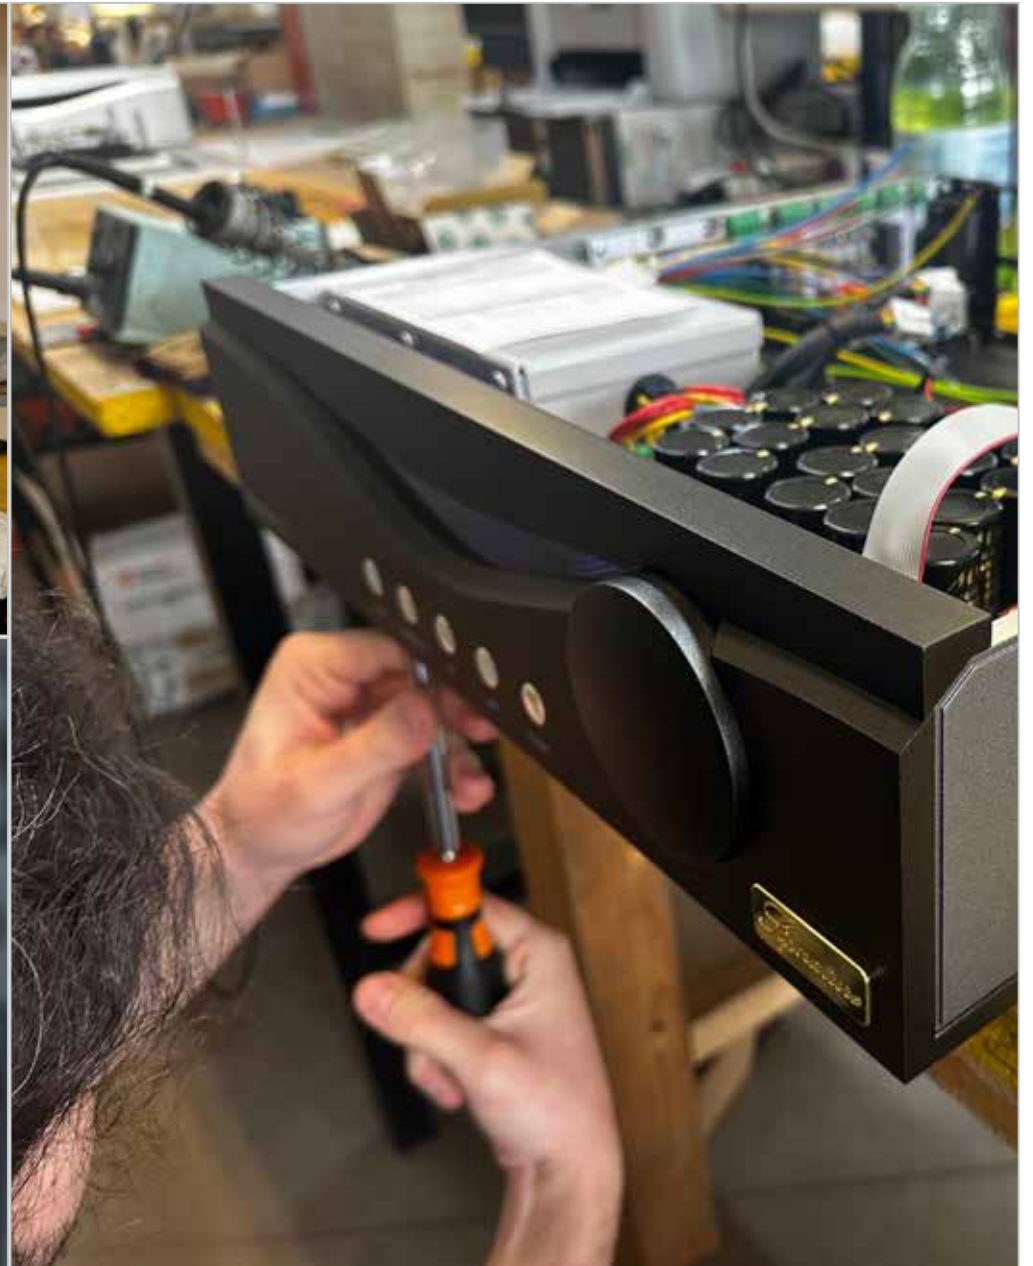

Massimiliano Marzi

Andrea Nardini

Founded in 1996 by Massimiliano Marzi and Andrea Nardini, Audia Flight designs and manufactures in Italy the finest high quality home audio components. All Audia Flight products are entirely handcrafted at our facility located in the town of Civitavecchia, near the Mediterranean Sea and just over 70 kilometers from Rome. Beginning with the fundamental belief that a component should not alter the electronic signal, Massimiliano and Andrea spent two years (1994-1996) on research and development that would soon form the basis for their company and all of its subsequent components. Their extensive research indicated that the traditional voltage feedback approach to circuit design, with its inability to handle high speed transients and complex loads, would tend to alter the electronic signal and thus introduce inaccuracies. So they set about designing a circuit around the lesser known current feedback approach. They soon discovered that their new ap-

proach to current feedback circuit design would allow for both higher speed responses and better load control, and thus produce a more accurate signal. And so, by incorporating their Audia Flight current feedback design approach Massimiliano and Andrea were able to finally achieve their goal that a component should not alter the incoming signal and Audia Flight was born! In 1997 Audia Flight brought to market the first version of our Flight 100 power amplifier. With its unique heatsink design and remarkable performance, the Flight 100 was well-received by the audiophile press and consumers. Soon thereafter Audia Flight introduced our Flight Pre and Flight 50 power amplifier to similar acclaim. The Flight Pre especially turned heads with its sophisticated multiple section cabinet design. The Flight Pre also featured another Audia Flight hallmark: a constant impedance volume attenuator for accurate frequency response at all volumes.

THE COMPANY

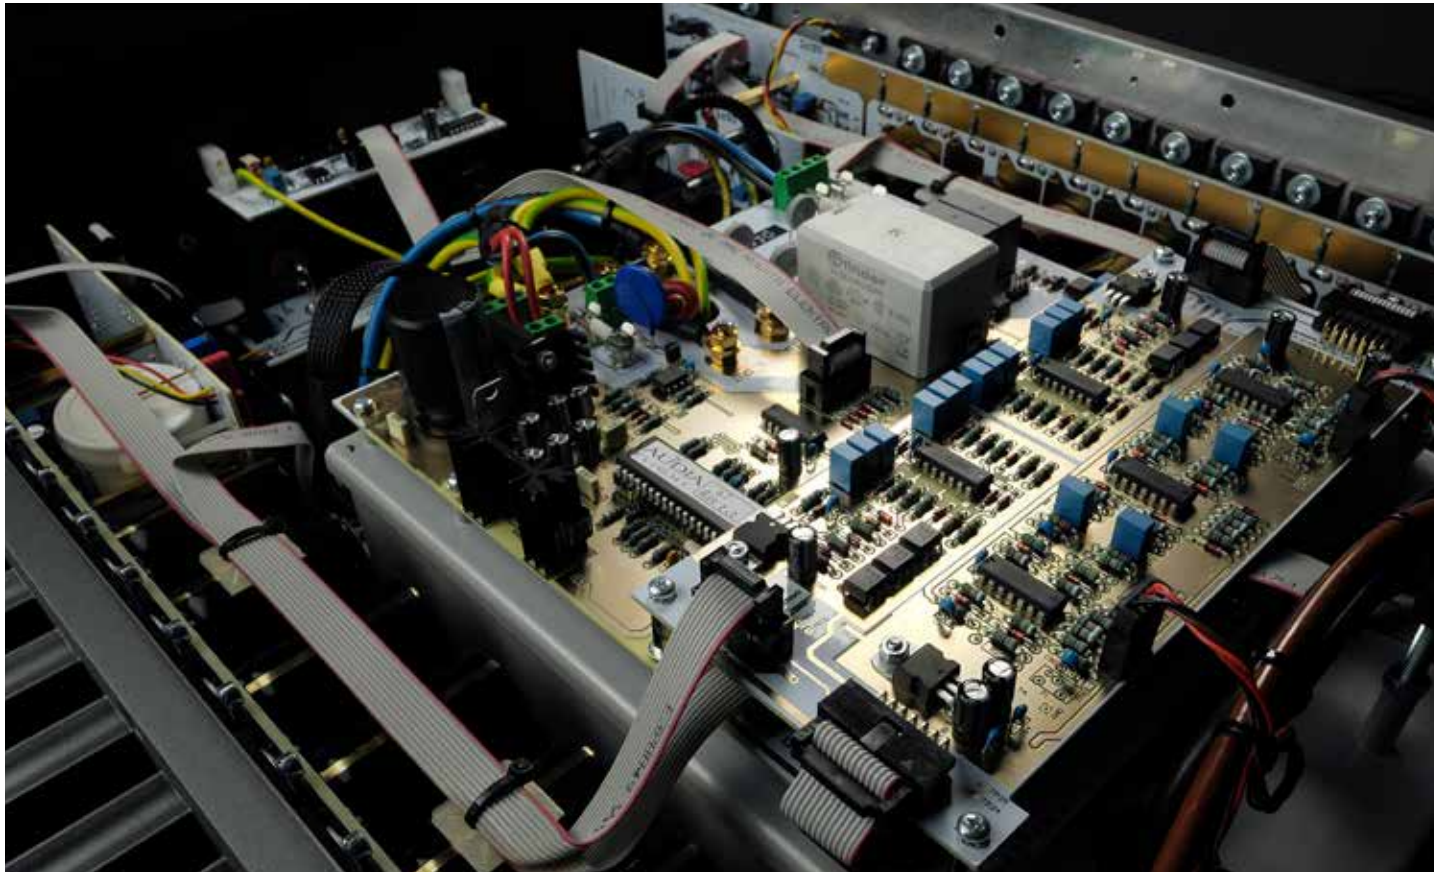

ITALIAN ART AND HANDICRAFT

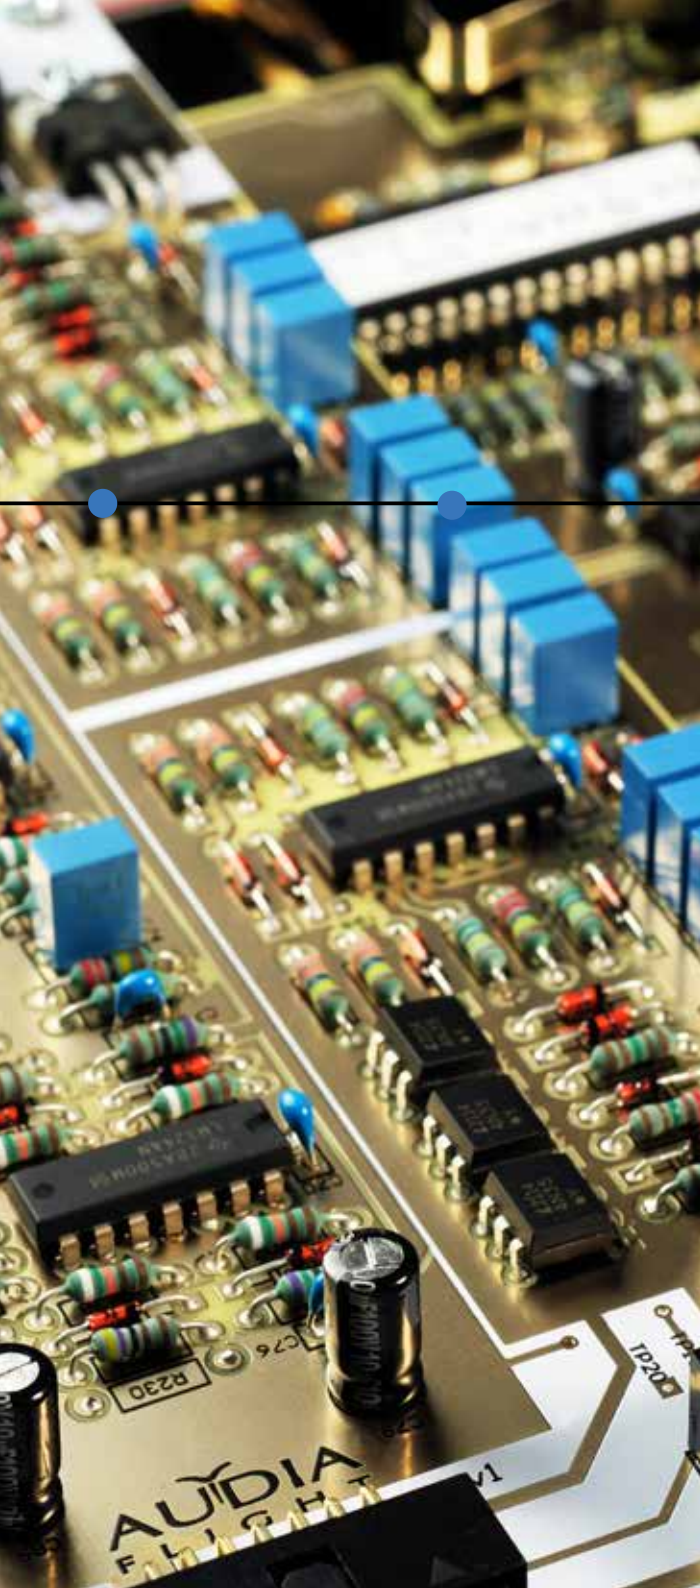

2001 saw the introduction of Audia Flight's first integrated amplifier, aptly named the Flight One. The Flight One incorporated many of the designs found in our Flight Pre, Flight 50, and Flight 100 amplifiers in order to achieve Audia Flight sonic excellence in a single component. And, with the consumer electronics market trending at the time toward 5.1 multichannel home theaters and audio, the Flight One featured an input specifically for multichannel processors, as well as an ideal three channel amplifier mate called the Flight 3.100. Beginning with our first product the Audia Flight mission has been very clear: our products shall result from the synergy of sophisticated, original circuit design and Italian style. Our creations, one could say, are a summary of the Italian culture: art and handicraft. Art, as the way that it conveys emotions and, handicraft, such as the ability to create beautiful objects. The sound, the "soul" of our products, then, is a mirror of our culture not only with its high tech research, but also of our culture and lives in Italy as well. Today the result of this Italian synergy is a family of Audia Flight products that includes our tried and true Classic Series, our Three S Series, our new high value FLS series, and our flagship Strumento Series. While the sum of all of our experience at Audia Flight goes into each and every product we make, our flagship Strumento represents many years of research and development leading to a perfected circuit design and a perfected casework design.

Italian synergy

Today the result of this Italian synergy is a family of Audia Flight products that includes our tried and true Classic Series, our Three S Series, our new high value FLS series, and our flagship Strumento Series.

AUDIA FLIGHT STRUMENTO SERIES

THE SUM OF OUR EXPERIENCE

Starting from our knowledge made to thank to our Classic line, after more than three years spent to developing our flagship, tested and listen all components including the chassis parts, we introduced the Strumento series, that represents the sum of our experience. There are so many details and features that it is impossible to itemize all of them! Starting for example from the front push button of the Strumento n.4 and Strumento n.8 handmade in our factory, the decoupling system of the base to discharge the spurious vibration from the transformers directly to the ground and not to the audio circuit chassis are just an example of our dedication of our Instruments for Music Lovers.

Strumento series is so fine that for two consecutive years, 2016 and 2017, we were honored to receive the Grand Prix Award by StereoSound from Japan!

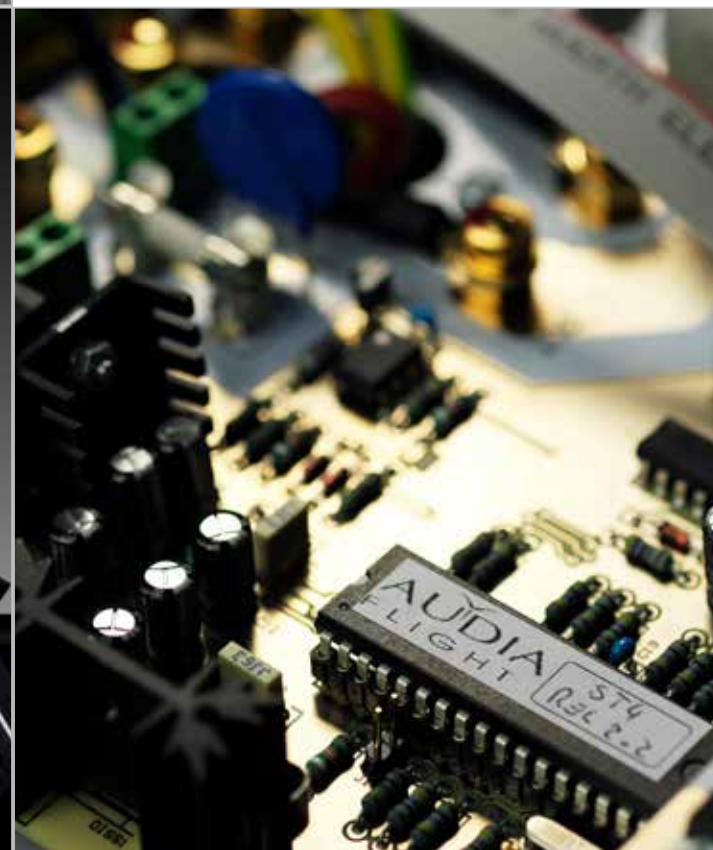

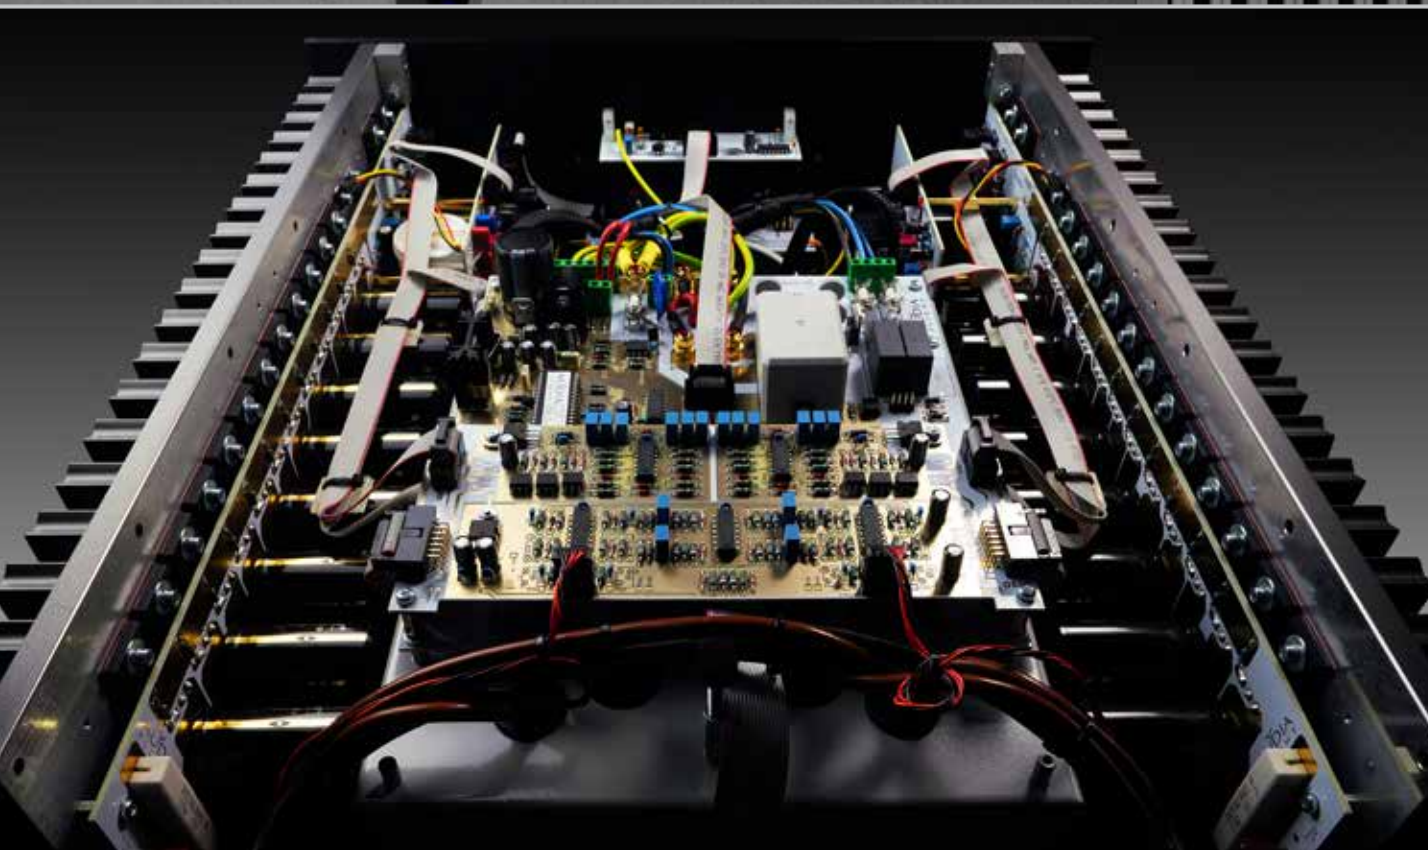

The decoupling system of Strumento power amplifiers base.

Signature Series

The first question we asked ourselves when we decided to improve the Strumento series was: where can we make changes to a sound that already seemed practically perfect? As with any creation where every parameter is pushed to the limits of its potential, the only area left to work on is the details. Only by refining every single aspect can we achieve truly superior overall performance. We are convinced of it: the new Strumento Signature models are undoubtedly the finest devices Audia has ever produced.

STRUMENTO N°1

Signature

STEREO PREAMPLIFIER

Strumento N°1 Signature Stereo Preamplifier is a groundbreaking advancement in audio fidelity that transcends the limits of its predecessor, the Strumento N°1 Evo and brings a more natural, immersive, and expansive soundstage to your listening room, delivering a true “live” experience like never before. A masterpiece of sonic precision engineered for those who demand nothing less than perfection, the Strumento N°1 Signature ensures flawless signal transmission to any power amplifier with extraordinary precision, accuracy, dynamics, and lightning-fast signal speed, boasting a bandwidth greater than 1MHz. Each refinement in the circuitry—carefully adjusted by ear—has been crafted to achieve ultimate sonic purity.

Exquisite Craftsmanship and Design

The Strumento N°1 Signature’s physical beauty matches its sonic excellence. A precious golden plaque on the front immediately highlights the exclusive class of this device. Made by ultra-high-grade aluminum casting, the chassis undergoes meticulous CNC machining before each part is painstakingly hand-polished to a mirror-like finish. Critical areas are further refined with precision shot peening and anodization, culminating in a stunning, luxurious design completed with elegant silk-screening. Every visual and tactile detail embodies the essence of refined Italian craftsmanship.

Sophisticated Power Supply and Noise Management

Beneath the surface lies a highly sophisticated power architecture, consisting of four toroidal transformers: two 75VA transformers dedicated to the main audio stages, one 25VA transformer for control boards, and a 15VA transformer for logic operations. Each transformer is enclosed within a fer-

romagnetic shield and encapsulated in epoxy resin, ensuring absolute isolation from interference. The ultra-low noise main power supply is equipped with 20 ultra-fast rectifying Mundorf capacitors (1500uF, 100V), wrapped in vibration-damping material to reduce any physical disturbances. This results in a preamplifier that operates with impeccable quietness and stability, maintaining sonic integrity at every turn.

Constant Impedance Volume Control

A critical challenge in preamplifier design is maintaining consistent impedance throughout volume adjustments. Traditional potentiometers often introduce variable impedance, degrading frequency response, slew rate, and internal coupling stability. To overcome this, Audia Flight has developed a custom constant impedance attenuator. This precision-engineered component, built from discrete, low-noise metallic film resistors and relays, provides a gain range of 127 dB in finely controlled 0.5 dB steps. The result is a volume control that is remarkably silent and consistently accurate, with an extended frequency response of 3Hz to 1MHz (-3dB) that allows an impressive slew rate exceeding 250V/us across the entire gain spectrum. An extensive use of high-end components along the signal path elevates audio information processing to perfection. The capacitors are from the German brand Mundorf, the resistors are Dale, and all relays are high-frequency Reed relays. All internal parts related to the audio signal, as bars, spacers and so on, are gold-plated to ensure perfect contacts over time.

Exclusive Class A Current-Feedback Gain Stage

The heart of the Strumento N°1 Signature is its proprietary

Class A current-feedback gain stage, featuring four independent stabilized power supplies per channel—two dedicated to the input and two to the output stages. This gain stage is encased in an aluminum enclosure and encapsulated in epoxy resin, ensuring thermal stability and shielding against external interferences. The output stage employs high-current, low-noise Class A MOSFET devices, capable of effortlessly driving any connected power amplifier with authority and finesse. Custom-printed boards are enhanced with extra gold surface, all internal parts related to the audio signal, as bars, spacers and so on, are gold-plated to ensure perfect contacts over time.

A Modular System for Maximum Flexibility

The Strumento N°1 Signature’s versatility extends beyond its stunning audio performance. It offers a modular design, allowing customization with additional cards for MM/MC phono inputs, SPDIF and USB digital inputs (192kHz/32bit resolution), and both unbalanced and balanced analog inputs. This flexibility ensures seamless integration into any high-end audio system, tailored to meet your exacting requirements.

A Benchmark in Preamplification

The Audia Flight Strumento N°1 Signature is a triumph of design and innovation, blending state-of-the-art electronics with masterful craftsmanship to deliver an unparalleled listening experience. Every detail, from the precision of its components to the elegance of its exterior, reflects our unwavering commitment to audio perfection. Discover the difference with the Strumento N°1 Signature, where technology meets artistry in a symphony of exceptional sound.

Technical data

Inputs: 2 balanced XLR and/or unbalanced RCA;
3 balanced XLR only
Outputs: 2 balanced XLR and 1 unbalanced RCA
Gain range: -90 dB / +10 dB
Gain resolution: 0.5 dB
Frequency response (1 W RMS -3 dB): 1 Hz - 1 MHz
Slew-Rate (@ 8 ohm): > 200 V/uS
THD: < 0,05 %
S/N Ratio: 105 dB
Input impedance: 10 pF 15 kOhm balanced or

unbalanced
Output impedance: 5 Ohm
Main voltage AC (50-60 Hz): 100, 110 - 115, 220 - 230, 240 V
Stand-by Power consumption: less than 0,5W
Nominal Power consumption: 90 W
Dimensions: 450x120x450 mm (WxHxD)
Weight: 22.5 Kg
Shipping dimensions: 580x300x580 mm (Wx-HxD)
Shipping weight: 38.5 Kg
Available finish: silver or black

STRUMENTO N°4

Signature

STEREO POWER AMPLIFIER

Strumento N°4 Signature stereo power amplifier is a two-channel unit designed for uncompromising sonic performance and refined aesthetics. With a bandwidth exceeding 1MHz and up to 1000 Watts of output power, it delivers remarkable precision and effortlessly controls even the most demanding speakers.

Impeccable Design and Construction

A golden plaque on the front highlights its exclusivity. The amplifier's chassis, crafted from the highest-grade aluminum casting, undergoes meticulous CNC machining, hand-polishing, shot peening, and anodization. These techniques result in a stunning metallic finish that embodies both elegance and durability. The final touch of refinement is achieved through precision silk-screening, completing its sophisticated presentation.

Unmatched Craftsmanship and Premium Components

Inside this stunning exterior lies a meticulously engineered system featuring fully balanced circuitry and an extensive selection of high-end components. Mundorf capacitors, Dale resistors, and high-frequency Reed relays ensure superior signal purity and low distortion. A massive 320,000uF capacitor bank provides ultra-stable energy delivery, ensuring exceptional dynamics and signal fidelity. Custom-printed circuit boards with extra gold plating, along with gold-plated internal audio components, enhance contact reliability and long-term performance.

Revolutionary Power Supply Architecture

The Strumento N°4 Signature sets new benchmarks in amplifier power supply design. Each channel is powered by dual high-current supplies, complemented by four independent stabilized stages—two for the input section and two for the Audia Flight current-feedback stage. Ultra-fast rectifiers and low-impedance capacitors provide flawless power filtration, minimizing

noise and interference. Two robust 150VA toroidal transformers power the main stages, while a dedicated 15VA toroidal transformer manages logic and protection circuits. Unlike traditional designs, it eliminates fuses in the output stage, using microprocessor-monitored current sensors for superior sonic purity.

Exclusive Gain Stage and Mechanical Innovation

At its core, a proprietary Class A current-feedback gain stage is housed in an aluminum enclosure, encapsulated in epoxy resin for thermal stability and shielding against electromagnetic interference. This design ensures optimal performance, preserving detail and accuracy in sound reproduction. The output stage benefits from a custom-built 3000VA transformer, sealed in epoxy resin with dual ferromagnetic shields for immense power and isolation.

Precision Vibration Isolation for Sonic Purity

Mechanical integrity is a priority in the Strumento N°4 Signature. The power transformers are mounted on an independent chassis, physically decoupled from the main audio circuit. This carefully engineered isolation system directs unwanted vibrations away from sensitive components, maintaining pristine sound quality even under high-power conditions.

A Statement in Sonic and Visual Excellence

The Strumento N°4 Signature stereo power amplifier is an extraordinary achievement in high-end audio engineering. With its fusion of cutting-edge technology, precision craftsmanship, and aesthetic brilliance, it delivers a musical experience of unparalleled depth and realism. Only the Strumento N°8 Signature Mono-block Power Amplifiers surpass its brilliance, making the Strumento N°4 Signature the ideal centerpiece for discerning audiophiles who demand nothing less than perfection.

Technical data

Output power per channel Watts RMS @ 8/4/2 Ohm: 300 / 600 / 1000 W

Gain: 29 dB

Input sensitivity: 1.41 Volts RMS

Frequency response (1 W RMS -3 dB): 0,3 Hz ÷ 1 MHz

Slew-Rate (@ 8 Ohm): > 200 V/uS

THD: < 0,05 %

S/N Ratio: 110 dB

Input impedance Unbalanced: 7,5 kOhm

Balanced: 7,5 kOhm

Damping factor (@ 8 Ohm): > 1000

Main voltage AC (50-60 Hz): 100, 110 - 115,

220 - 230, 240 V

Stand-by Power consumption: less than 1 W

Nominal Power consumption (no signal): 400 W

Power consumption (260 W RMS @ 8ohm both channels): 1000 W

Dimensions: 450x280x500 mm (WxHxD)

Weight: 103.5 Kg

Shipping dimensions: 580x410x700 mm (WxHxD)

Shipping weight: 124 Kg

Available finish: silver or black

STRUMENTO N°8

Signature

MONOBLOCK POWER AMPLIFIER

Strumento N°8 Signature mono-block power amplifier is a masterpiece of high-fidelity audio engineering and Italian craftsmanship, that sets a new benchmark in mono-block amplification. Designed with meticulous precision, it blends technological innovation, premium materials, and world-class construction, ensuring an unparalleled listening experience. Every component is scrutinized for peak performance, much like a master luthier perfecting a fine instrument.

Uncompromised Power and Precision

With an ultra-fast response exceeding 1MHz and up to 2300 Watts of output power, the Strumento N°8 Signature delivers unmatched control over any loudspeaker system. Its mono-block architecture enhances channel separation, creating a breathtakingly pure and immersive soundstage. Every musical nuance is faithfully reproduced with astonishing clarity and dynamics.

Engineering Refined by Human Perception

Beyond technical excellence, expert audio specialists have spent countless hours fine-tuning its circuitry through extensive auditory tests. Each resistor and capacitor is carefully selected, transforming the amplifier into an instrument of true musical expression, capable of conveying the deepest emotions within the music.

Italian Craftsmanship in Every Detail

A golden plaque signifies its exclusivity, while the robust aluminum chassis is a feat of precision engineering. Machined using advanced CNC technology, each piece undergoes meticulous hand-polishing, shot peening, and anodization, resulting in a flawless finish. Elegant silk-screening adds the final touch of sophistication, making the Strumento N°8 Signature as visually stunning as it is sonically remarkable.

Immaculate Internal Design

Inside, fully balanced circuitry and premium-grade components optimize audio performance. High-end Mundorf capacitors, Dale resistors, and high-frequency Reed relays ensure ultimate signal purity. A massive 320,000uF capacitor bank provides exceptional energy stability, while custom gold-plated circuit boards, ultra-fast rectifiers, and meticulously gold-plated signal pathways preserve sonic integrity over time.

Revolutionary Power Supply Architecture

Two independent, high-current power supplies drive each channel, supported by four separate stabilized stages for minimal noise and superior stability. Dual 150VA toroidal transformers power the main stages, while a 15VA transformer handles logic and control. Traditional fuses are replaced with microprocessor-monitored current sensors, eliminating resistive limitations for optimal energy flow.

Exclusive Class A Current-Feedback Gain Stage

The proprietary gain stage, housed in an aluminum shield and encapsulated in epoxy resin, ensures stability and protection against interference. The output stage features a colossal 3000VA custom audio transformer, sealed with epoxy and enclosed in dual ferromagnetic shields, delivering immense power with absolute precision.

Advanced Vibration Control for Sonic Purity

Mechanical innovations further enhance performance. Power transformers are isolated from the main audio circuitry, discharging unwanted vibrations through an independent chassis. This meticulous approach preserves clarity, even under extreme power demands.

STRUMENTO N°1 EVO

STEREO PREAMPLIFIER

It has long been said, “the heart of any audio system is the preamplifier.” The preamplifier’s job sounds simple: convey a purity of sound, without coloration or adulteration of original audio signal, with nothing being added but also nothing being lost in translation. Okay, so it’s not that easy. And yet that’s where our efforts at Audia Flight have elevated the preamplifier state of the art. The Audia Flight Strumento N°1 Evo Stereo Preamplifier is the perfect device to transfer a perfect signal to any power amplifier with its precision, accuracy, dynamics and incredible signal speed (bandwidth more than 1MHz). We’ve used our trained human ears to aide us with circuit refinements over the original Strumento N°1 and in this latest release we improved gain stages along with a new, redesigned, output stages. This effort has allowed us to more closely achieve our goal of sonic perfection with the Strumento N°1 Evo, much like a luthier uses years of experience, craftsmanship, and keen ear to find the perfect tonal character and emotional response for their instruments. The Strumento N°1 Evo chassis begins its life as an ultrahigh grade, bespoke aluminum cast. After the CNC finishing work is completed, every part is then closely inspected and “mirror polished” by hand. Some critical areas are further finished by hand, with shot peening and anodization completing the beautiful metalwork. The final touch is an elegant silk screening process. Within the Strumento N°1 Evo’s gorgeous chassis one finds it is powered by four toroidal transformers (two 75VA toroidal audio transformers for the main stages, one 25VA toroidal audio transformer for the control boards, and one 15VA toroidal transformer for the logic board), all enclosed within a ferromagnetic shield and encapsulated by epoxy resin. The main power supply is extremely low noise, the filter being made by ultra-fast rectifiers and n.40 680 uF

100V extra low impedance capacitors. On the electrolytic capacitors an EMI shield and vibration damping material is used to reduce any physical noises to a minimum. The main power supply is composed of eight, very low noise power supply stages. Each amplification channel with its fully balanced circuitry is on an independent print board. Custom printed circuit boards with an extra high-grade surface copper are used, as ultra pure copper bars are used for ground and power supplies. After the input selection and a buffer, the input signal meets the volume control. A crucial point in all preamplifiers is represented by the volume control. Often the volume control can introduce a variable impedance element as a function of the attenuation value (that is to say, the position of the potentiometer). The undesirable result is that the frequency response, slew-rate and even the internal impedance couplings among different stages are not fixed and become a function of the attenuation value (volume). This ultimately reduces the preamplifier’s ability to produce an accurate signal for the power amplifiers to further amplify. For this reason, Audia Flight has developed a constant impedance attenuator. This custom Audia Flight attenuator is composed of discrete components (low-noise metallic film resistors and relays) and provides a gain range as high as 127 dB while providing constant steps of 0.5 dB. The accurate high-performance result we have obtained with this attenuator likely is well beyond standard attenuators found elsewhere, as our measurements show that the Strumento N°1 Evo has an out of the ordinary extended frequency response (3Hz / 1MHz -3 dB) and the high value of slew rate (>250V/us throughout the entire gain range (-90 /+10 dB). This completely new volume control has constant impedance and it is absolutely silent as the volume is raised and

lowered. The Strumento N°1 Evo gain stage is an exclusive AudiaFlight design consisting of an entirely class A current-feedback circuitry. It is fed by four stabilized independent stages per each channel: two for the input stages and two for the output stage. The gain stage is enclosed within an aluminum box and encapsulated by epoxy resin to grant a thermal stabilization for all gain stage’s components. The high-current low-noise output stage is made of Class A biased MOSFET audio devices, and is able to drive any kind of amplifier.

STRUMENTO N°4 MkII

STEREO POWER AMPLIFIER

A masterpiece in aesthetics and electronics in a single chassis, the Strumento N°4 mk2 Stereo Power Amplifier is surpassed only by a pair of its sibling the Strumento N° 8 Mono-block Power Amplifier.

The Strumento N°4 mk2 Stereo Power Amplifier is a close to perfection state of the art two channel power amplifier that exhibits incredible response speeds (bandwidth greater than 1MHz), high output power (up to 900 Watts), and nearly unlimited speaker driving/control capability. For the mk2 version we've used our experience in designing its sibling the Strumento N° 8 Mono-block Power Amplifier as well as our trained human ears to aide us to further refine the original Strumento N°4 circuit (such small, but critical changes include the value of resistors and capacitors). This effort has allowed us to more closely achieve our goal of sonic perfection with the Strumento N°4 mk2, much like a luthier uses years of experience, craftsmanship, and keen ear to find the perfect tonal character and emotional response for their instruments. The Strumento N°4 mk2's chassis begins its life as an ultra high grade, bespoke aluminum cast. After the CNC finishing work is completed, every part is then closely inspected and "mirror polished" by hand. Some critical areas are further finished by hand, with shot peening and anodization completing the beautiful metal work. The final touch is an elegant silk-screening process. The amplifier's gain stage is an exclusive Audia Flight design consisting of an entirely class A current-feedback circuitry. To further isolate this critical part of the amplification process from interference and grant thermal stabilization for all of its discrete components, the gain stage is enclosed within an aluminum box and encapsulated in an epoxy resin. Meanwhile, the output stage of the Strumento N°4 mk2 is powered by a massive 3000VA custom made audio transformer, encapsulated by epoxy resin and sealed within two ferromagnetic shields. Ultra-fast rectifiers instead of fuses are used

on the main power supply for the output stage. With every circuit detail addressed, we then turn to mechanical details to complete this masterpiece! When the amplifier is on a shelf, the power transformers, located on an independent chassis, are physically decoupled from the audio circuit chassis, thus discharging to ground any spurious vibrations from the transformers should they be present. Within the beautiful casework of the Strumento N°4 mk2 one finds yet more attention to detail and incredible Italian craftsmanship. There you will find a fully balanced circuitry, carefully selected ultra high grade components throughout, a massive power supply built with extra low impedance, ultra high grade capacitors (280.000 uF alone on the main power supply), custom printed boards with an extra high-grade surface copper, and ultra pure copper bars in the output stages. But we have chosen to not stop there with the Strumento N°4 mk2 StereoPower Amplifier! The Strumento N°4 mk2's power supply is comprised of two super high current power supplies per channel and four stabilized independent stages for each channel: two for the input stages and two for the Audia Flight current feedback stage. The gain stage's power supply is designed to achieve extremely low noise, the filter is made by ultra fast rectifiers and extra low impedance capacitors. Two 150VA toroidal audio transformers are used for the main stages and one 15VA toroidal transformer is used for the logic control and protections. The main power supply is made by n.28 10.000 uF 40V extra low impedance capacitors. No fuses are found in the main power supply for the output stage (we find fuses are like a "resistors" and can negatively impact the sound), instead a current sensor read by microprocessor is employed.

Technical data

STRUMENTO N°8

MONOBLOCK POWER AMPLIFIER

*Precision
power
velocity.*

After completing the long development process for the original Strumento N°4 Stereo Power Amplifier we next sought to redefine the mono-block power amplifier state of the art. As in its single chassis stereo sibling, the Strumento N°8 is a nearly perfect power amplifier that exhibits incredible response speeds (bandwidth greater than 1MHz), massive output power (up to 2000 Watts), and thanks to its status as a mono-block amplifier unlimited speaker driving/control capability. With the advantage of using a single amplifier for each channel, a pair of Strumento N°8 Mono-block Power Amplifiers are able to surpass the performance of the incredible Strumento N°4 mk2 Stereo Power Amplifier. With a mono-block power amplifier in mind we've used our trained human ears to aide us with circuit refinements (such small, but critical changes include the value of resistors and capacitors). This effort has allowed us to more closely achieve our goal of sonic perfection with the Strumento N°8, much like a luthier uses years of experience. The Strumento N°8 chassis begins its life as an ultra high grade, bespoke aluminum cast. After the CNC finishing work is completed, every part is then closely inspected and "mirror polished" by hand. Some critical areas are further finished by hand, with shot peening and anodization completing the beautiful metal work. The final touch is an elegant silk-screening process. Within the beautiful casework of the Strumento N°8 one finds yet more attention to detail and incredible Italian craftsmanship. There you will find a fully balanced circuitry, carefully selected ultra high grade components throughout, a massive power supply built with extra low impedance, ultra high grade capacitors (190.400 uF alone on the main power supply), custom-printed boards with an extra high grade surface copper, and ultra pure copper bars in the output stages. But we have cho-

sen to not stop there with the Strumento N° 8 Mono-block Power Amplifier! The Strumento N° 8's power supply is comprised of two super high current power supplies for its single channel and four stabilized independent stages: two for the input stages and two for the Audia Flight current feedback stage. The gain stage's power supply is designed to achieve extremely low noise, the filter is made by ultra-fast rectifiers and extralow impedance capacitors. Two 150VA toroidal audio transformers are used for the main stages and one 15VA toroidal transformer is used for the logic control and protections. The main power supply is made by n.28 6.800 uF 63V extra low impedance capacitors. No fuses are found in the main power supply for the output stage (we find fuses are like a "resistors" and can negatively impact the sound), instead a current sensor read by microprocessor is employed. The amplifier's gain stage is an exclusive Audia Flight design consisting of an entirely class A current feedback circuitry. To further isolate this critical part of the amplification process from interference and grant thermal stabilization for all of its discrete components, the gain stage is enclosed within an aluminum box and encapsulated in an epoxy resin. Meanwhile, the output stage of the Strumento N°8 is powered by a massive 3000VA custom made audio transformer, encapsulated by epoxy resin and sealed within two ferromagnetic shields. Ultra-fast rectifiers instead of fuses are used on the main power supply for the output stage. With every circuit detail addressed, we then turn to mechanical details to complete this masterpiece! When the amplifier is on a shelf, the power transformers, located on an independent chassis, are physically decoupled from the audio circuit chassis, thus discharging to ground any spurious vibrations from the transformers should they be present.

AUDIA FLIGHT FLS SERIES

With the FLS Series we are revisiting elements of our tried and true Classic Series, though the FLS Series takes many of its circuit design cues from our reference Strumento Series. One might say then that the FLS Series represents all we have learned over our 20 plus years with Audia Flight. Our latest news is the new foot that use a spherical shock absorbers. The FLS family has been created to bring the music lover closer to the level of our Strumento Series without the Strumento Series inherent cost-no-object approach.

FLS1

STEREO, FULL BALANCED PREAMPLIFIER WITH HEADPHONE AMPLIFIER

Available in silver and black finish

The FLS1 is an unrivalled preamplifier on his category where speed, driving capability and control ability are elements close to perfection. Also a true Headphone power amplifier using Audia Flight technology ensure to your headphone a perfect and relaxed music listening. The output power is 12Wrms on 8 ohm! So it is able to drive any kind of headphone with perfect control and high current. Also two sets of gain can be choosing. FLS1 is full balance preamplifier with an high-end volume control in dual mono configuration (each channel is assembled on separate print board), XLR and RCA outputs, REC RCA (fix level) output, three RCA inputs, two XLR inputs. TheFLS1 is powered by three toroidal transformers close into a metal shield, with very low noise power supplies. The FLS1 gain stage is an exclusive Audia Flight design consisting of an entirely class A current-feedback circuitry. It is fed by four stabilized independent stages per each channel: two for the input stages and two for the output stage. The high-current low-noise output stage is made of Class A biased MOS-FET audio devices, and is able to drive any kind of amplifier. All inputs can be activated or deactivated, the gain can be adjusted (+/- 6dB), all name inputs can be renamed. The FLS1 is the perfect device to "bring" musical signal with the best precision, energy and speed (bandwidth more than 500KHz) from sources to your amplifier. Full brushed aluminum chassis, engraved "Audia Flight" logo on top cover, one aluminum remote control brushed and anodized, OLED blue display are Hi-END details. There is the possibility to install two optional cards among the available ones, plug and play, so very easy to install.

Optional Boards available

FLS DAC
MC/MM Phono
RCA inputs
XLR inputs

Technical data

Inputs: 3 unbalanced (RCA), 2 balanced (XLR)

Outputs: 1 unbalanced (RCA), 1 balanced (XLR), 1 REC unbalanced (RCA)

Gain range: -90dB / +10dB

Gain resolution: 0,5dB

Frequency response (-3dB): 0,3 Hz - 500 KHz

THD: < 0,05 %

S/N Ratio: 110 dB

Input impedance: 47 Kohm

Output impedance: < than 1 ohm

Headphone output power per channel: 12W Wrms on 8 ohm, 10Vrms

Main voltage AC (50-60Hz): 100, 110-115, 220-230, 240 V

Stand-by power consumption: less than 1 W

Power consumption: 50 W

Dimensions and weight: 450x120x380mm (WxHxD) - 15 Kg

Shipping dimensions and weight: 600x270x-560mm (WxHxD) - 19 Kg

Available finish: silver or black

FLS4

STEREO POWER AMPLIFIER

The Audia Flight FLS4 Stereo Power Amplifier is an incredible stereo power amplifier with high response speed (bandwidth more than 0,7MHz), high power (up to 700 Watts), and nearly unlimited speaker driving/ control capability. Like the Strumento Series we've used our trained human ears to aide us in the FLS 4's design process. This effort has allowed us to produce an amplifier that more closely achieves our goal of sonic perfection, much like a luthier uses years of experience, craftsmanship, and keen ear to find the perfect tonal character and emotional response for their instruments. Like its Strumento brethren the FLS4's chassis begins its life as an ultra high grade, bespoke aluminum cast. After theCNC finishing work is completed, every part is then closely inspected and "mirror polished" by hand. Some critical areas are further finished by hand, with shot peening and anodization completing the beautiful metal work. The final touch is an elegant silk-screening process. Similarities to the Strumento Series amplifiers can be found within the FLS4 as well. A long list would include a fully balanced circuitry, highly selected components, 32 high grade power devices, and power supply built with low impedance capacitors (288.000 uF alone on the main power supplies). The FLS4's gain stage is once again the exclusive Audia Flight design consisting of an entirely class A current-feedback circuitry. And to further isolate this critical part of the amplification process from interference and grant thermal stabilization for all of its discrete components,

the gain stage is enclosed within an aluminum box and encapsulated in an epoxy resin. Add to this that the main power supply is made by n.16 18.000uF 50V low impedance capacitors and is then composed of two super high current power supplies per channel, as well as four stabilized independent stages per each channel: two for the input stages and two for the Audia Flight current feedback stage! And, of course, as is our philosophy, one 15VA toroidal transformer is used for the logic control and protection circuit in order to completely isolate it from the audio circuit. With a total then of 12 power supplies, custom printed circuit boards with an extra high-grade surface copper, a 2000VA toroidal audio transformer enclosed within two ferromagnetic shields and encapsulated by epoxy resin powering the output stage, no fuses in the main power supply for the output stage (we find fuses are like a "resistors" and can negatively impact the sound) as a current sensor read by microprocessor is employed, and 200 Watts RMS @ 8 Ohms output power one can see numerous "Strumento-esque" elements have gone into making the FLS 4 Stereo Power Amplifier capable of providing the listener with the best performance and emotional musical experience. So one can see in the FLS4 Stereo Power Amplifier the Audia Flight familial resemblance is hard at work. Much like our reference Strumento N°4 mk2 Stereo Power Amplifier, the FLS4 Stereo Power Amplifier is designed to bring your music to life and your audio system to another level of perfection.

Available in silver and black finish

Technical data

Output power per channel Watts RMS @ 8/4/2 Ohm :
200 / 380 / 700 W

Gain: 29 dB

Input sensitivity: 1.41 Volts RMS

Frequency response (1 W RMS -3 dB): 0,3 Hz ÷ 0,7
MHz (measured before output inductor)

Slew-Rate (@ 8 Ohm): > 160 V/uS

THD: < 0,05 %

S/N Ratio: 110 dB

Input imp. Unb.: 7,5 kOhm Bal.: 7,5 kOhm

Damping factor (@ 8 Ohm): > 650

Shipping dimens.: 575x280x545 mm (WxHxD)

Shipping weight: 43 Kg

*700 Wrms measured without current limitation added

Available finish: silver or black

FLS8

MONOBLOCK POWER AMPLIFIER

Available in silver and black finish

The Audia Flight FLS8 Power Amplifier represents our latest mono power amplifier, featuring exceptional responsiveness, formidable power output (up to 800 Watts 4 Ohm), and an unparalleled ability to drive and control speakers effectively. Drawing inspiration from the acclaimed Strumento Series, our design process for the FLS8 involved training our ears to achieve our sonic perfection goal. This approach mirrors the way a skilled luthier utilizes years of experience, craftsmanship, and a discerning ear to craft instruments with the ideal tonal character and emotional response.

The FLS8 chassis initiates as an ultra-high-grade, custom aluminum cast, undergoing meticulous CNC finishing before each part undergoes thorough inspection and hand-polishing, creating a mirror-like finish. Critical areas receive additional manual finishing, including shot peening and anodization, culminating in a visually stunning product achieved through an elegant silk-screening process.

The FLS8 shares similarities with the Strumento Series amplifiers, including fully balanced circuitry, carefully selected components, 32 high-grade power devices, and a power supply equipped with low impedance capacitors (128000uF only on the main power supply).

The exclusive Audia Flight design of the FLS8 gain stage incorporates an entirely class A current-feedback circuitry. To isolate this crucial amplification stage from interference and provide thermal stabilization for its discrete components, the gain stage is enclosed within an aluminum box

and encapsulated in epoxy resin. The main power supply comprises 16 low impedance capacitors (6800uF, 63V each) and consists of two super high current power supplies per channel, along with four stabilized independent stages for each channel, two for the input stages and two for the Audia Flight current feedback stage. Adhering to our philosophy, a 15VA toroidal transformer is dedicated to the logic control and protection circuit to ensure complete isolation from the audio circuit. With a total of 12 power supplies, custom printed circuit boards featuring extra high-grade surface copper, a 2000VA toroidal audio transformer enclosed within two ferromagnetic shields and encapsulated by epoxy resin powering the output stage, absence of fuses in the main power supply for the output stage (as fuses can negatively impact sound), and the utilization of a current sensor read by a microprocessor, the FLS8 Mono Power Amplifier incorporates various "Strumento-esque" elements, delivering optimal performance and an emotionally captivating musical experience for the listener.

FLS9

INTEGRATED STEREO AMPLIFIER

Available in silver and black finish

If you are looking for an integrated amplifier intended to celebrate music, FLS 9 is the answer. It is designed to bring musical details to life, delivering a finely balanced sound with depth and clarity. Designed following the most recent audio knowledge available, FLS 9 has been tuned by ear, testing each component and choosing only those that allowed a real improvement in sound. The end result is an arrangement that produces a much cleaner signal path and lets music breathe. In short, FLS 9 is perfect outcome of the philosophy that animates for 25 years Audia brand, "nothing added, nothing takenaway". Four special composite pads with NBR rubber spheres ensure the best vibration control. An aluminum brushed and anodized remote control is also supplied as standard. It shares with FLS 1 model same fully balanced preamplifier stage boards. Power channels use 12 highly selected power devices, 8 power supply circuits with extra low impedance and very low noise, high quality capacitors (120.000 uF), special printed boards with extra thick copper layer, 1000 W shielded audio toroidal transformer. The 150 W_{rms} (8 ohm) output power follows the acclaimed Audia tradition of speed, power, driving capability and control ability. The FLS 9 is also suitable for less efficient, impedance critical (down to 2 ohm) loudspeaker systems. The elegant chassis is full brushed aluminum with engraved logo on top cover, the large display is OLED blue. The remote control is from solid aluminum milled, brushed and anodized. There is the possibility to install two optional cards among the available ones, plug and play, so very easy to install.

Optional Boards available

FLS DAC
MC/MM Phono
RCA inputs
XLR inputs

Technical data

Output power per channel Wrms:
150/290/500 (8/4/2 ohm)

Inputs: 3 unbalanced (RCA), 2 balanced (XLR)
Outputs: 1 unbalanced (RCA), 1 balanced (XLR),
1 REC unbalanced (RCA)

Gain range: -90 dB / +10 dB

Gain resolution: 0,5 dB

Frequency response (-3 dB): 0,3 Hz - 500 KHz

THD: < 0,05 %

S/N Ratio: 110 dB

Input impedance: 47 Kohm

Damping factor (on 8 ohm): > 500

Main voltage AC (50-60 Hz): 100, 110-115,
220-230, 240 V

Shipping dimensions: 570x280x560 mm (WxHxD)

Shipping weight: 33.5 Kg

Available finish: silver or black

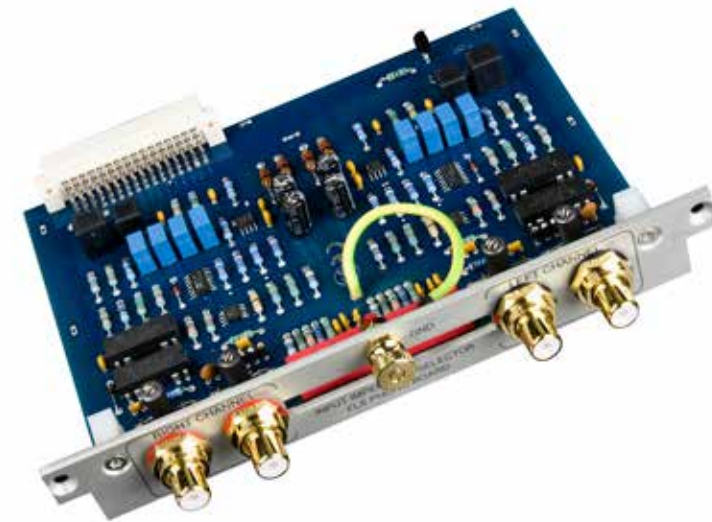

FLS10

FULL BALANCED STEREO AMPLIFIER

Available in silver and black finish

The FLS10 is the perfect choice for a hi-end integrated amplifier. Heart of FLS10 is the FLS4 power amplifier. In effect the power amplifier of the FLS10 use same technology of FLS4 power amplifier, where speed, power, driving capability and control ability are elements close to perfection. A fully balanced circuitry, highly selected components, 32 power devices, a power supply built with extra low impedance, high quality capacitors (288.000 uF only on the main power suppliers), 12 power suppliers, special print boards with an extra high surface copper, 2000VA toroidal, shielded audio transformer, 200Wrms on 8ohm output power are only few of main elements to give you the best and emotional experience in term of reproduction. It is also suitable for less efficient, impedance critical and low ohm loudspeaker systems down to 2 ohm. The preamplification section is full balance with an high-end volume control in dual mono configuration, XLR and RCA outputs, REC RCA (fix level) output, three RCA inputs, two XLR inputs. All inputs can be activated or deactivated, the gain can be adjusted (+/-6dB), all name inputs can be renamed. Full brushed aluminum chassis, engraved "Audia Flight" logo on top cover, one aluminum remote control brushed and anodized, OLED blue display are Hi-END details. There is the possibility to install two optional cards among the available ones, plug and play, so very easy to install.

FLS20

TOP LOADING SACD PLAYER

Available in silver and black finish

Over decades, Audia has continued to actively develop CD players, accumulating and refining experience about this audio technology. The new FLS20 SACD achieves the essence of a high-end disc player: ultra-high precision in reading discs and delivering high quality audio signals to the audio chain. For this result, the signal paths are as short as possible and all the circuitry is minimized. After a long and extenuating process of listening sessions and sophisticated technical measures, the disk drive system has totally been designed from scratch in order to virtually eliminate any vibration, both from inside and outside the chassis. Vibrations are the biggest enemy of disk players and sonic top performances cannot be obtained without a total control of drive vibrations. Disc information can be read with impeccable precision and a clean, high-quality signals fed to the FLS20 SACD's advanced circuitry. The unit has solidly built casework with a thick aluminum front panel. Conversion section uses 2 x Sabre ES9038PRO 32-Bit Dacs (one x channel, mono mode), plus a Crystek CCHD-950 ultra low noise clock. Digital circuits are powered by 10 ultra low noise power supplies. The output section is, in Audia Flight style, fully balanced Class A discrete current feedback, so balanced and unbalanced analog output are available. It is powered by 4 low noise discrete components voltage regulators. FLS20 power supply uses 3 completely separate toroidal transformers for the analog stage (80VA), digital stage (85VA) circuits and a 15VA for logic control. Connections flexibility is ensured by 4 built in digital inputs (Toslink, AES/EBU, S/PDIF, USB) and 4 digital outputs (Toslink, AES/EBU, S/PDIF I2S).

Dedicated optional streamer board available

Technical data

Frequency response:

2 Hz - 50 KHz \pm 0.5dB (SACD)

2 Hz - 20 KHz \pm 0.5dB (CD)

S/N ratio: 110 dB

THD: 0.002%

Analogue outputs: balanced and unbalanced

Maximum output voltage: 2.5 Vrms

Output impedance: 240 Ohm

Digital inputs: 4 (Toslink, AES/EBU, S/PDIF,

USB)

Digital outputs: 4 (Toslink, AES/EBU, S/PDIF, I²S)

Stand-by power consumption: less than 1 W

Power consumption: 150 W

Main voltage AC (50-60 Hz): 100, 110-115,

220-230, 240 V

Dimensions: 450x134x364 mm (WxHxD)

Weight: 17 Kg

Shipping dimensions: 530x310x530 mm (WxHxD)

Shipping weight: 22 Kg

Available finish: silver or black

FLS optional boards

The FLS series has a large selection of optional boards that meet all customer needs.

It is possible to install for example the FLSDAC board and the FLS PHONO board. In that case the FLS main unit will have in total 12 inputs, between line, digital and phono inputs! Or if you need more line inputs, you can use the FLS RCA board or the FLS XRL boards or both! All easy to install, just plug and play!

FLS MM/MC phono board

The FLS PHONO board is a phono board pre-amplifier with two inputs, MM and MC. Using our technology, this phono preamplifier is incredibly quiet, despite its high gain, 66dB for MC input and 46dB for MM input. A large input impedance selection is selectable and also it is possible to add a custom impedance for particular input impedance value. The FLS PHONO board is easy to install, plug and play. The two inputs will be added to the standard inputs of the unit.

FLS DAC board

The FLS DAC board is a premium dac with five digital inputs, two opticals, one AES/EBU, one SPDIF and one USB, all with galvanic isolation to prevent any digital noise from the sources. For each input it is possible to set a specified digital filter (seven different filters for PCM signal, two for DSD). The dac board uses the ESS 9028 Pro DAC converter with eleven voltage regulators. With the USB input it is possible to play files up to 32 bit 384kHz and DSD512 (using our Windows driver). The FLS DAC board is easy to install, plug and play. The five digital inputs will be added to the standard inputs of the unit.

FLS RCA board

The FLS RCA board is a particular board that adds two RCA inputs to your FLS unit. The FLS RCA board is easy to install, plug and play. The two inputs will be added to the standard inputs of the unit.

FLS XLR board

The FLS XLR board is a particular board that adds two XLR inputs to your FLS unit. The FLS XLR board is easy to install, plug and play. The two inputs will be added to the standard inputs of the unit.

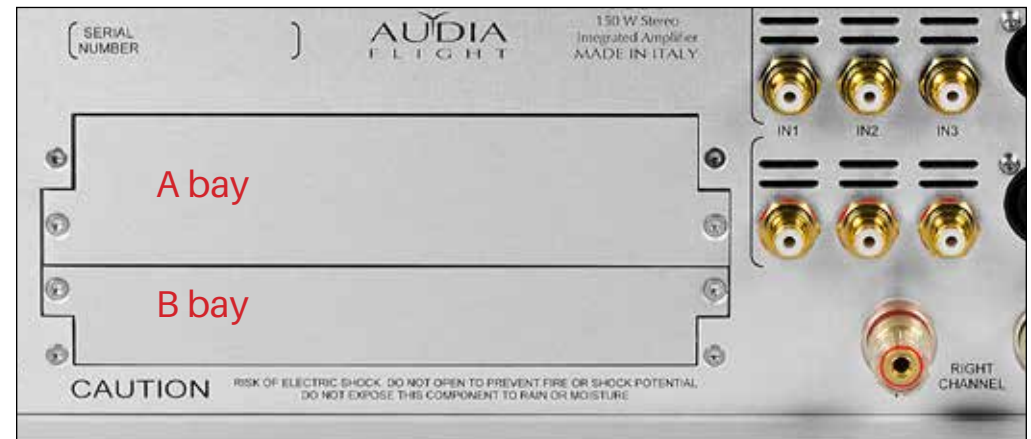

FLS Streamer DAC board

The FLS Streamer DAC is a premium board which combines the functionality of streamer and D/A converter in a single unit. Converter section with four digital inputs, two opticals, one AES/EBU and one SPDIF. The streaming section uses the Mconnect Software Platform and supports complete set of Network Audio Protocols: DLNA/UPnP, Spotify Connect, TIDAL Connect and ROON. The device that will be used as remote control must have installed the free app "mconnect Player Lite", available on Google Play Store or Apple Store, depending on devices to be used. For FLS20 SACD only.

FLS20 Streamer board

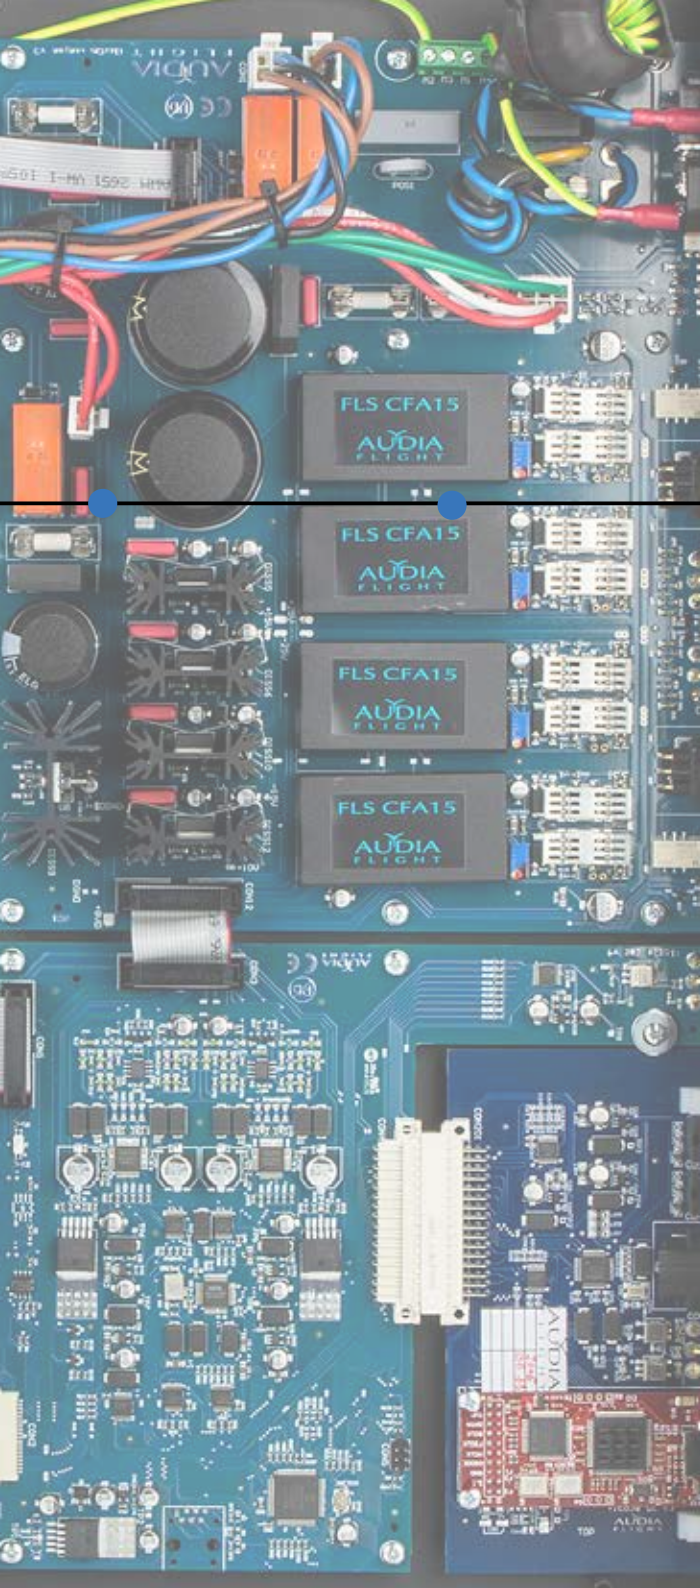

The board uses the Mconnect Software Platform and supports complete set of Network Audio Protocols: DLNA/UPnP, Spotify Connect, TIDAL Connect and ROON, up to 32bit & 384kHz PCM & DSD256 audio support. Integrated Internet Music: TIDAL, Deezer, Qobuz, vTuner and Spotify. The device that will be used as remote control must have installed the free app "mconnect Player Lite", available on Google Play Store or Apple Store, depending on devices to be used. For FLS20 SACD only.

Optional FLS boards combination

The FLS preamp and integrated units have two small removable panels on the back where it is possible to insert the optional boards. Due to the shape of each optional board panel, two boards can be mounted together considering these constraints. The FLS20 SACD has its own dedicated optional streamer board.

- FLS DAC and Streamer/DAC can be mounted only in A bay.
- FLS MC/MM Phono can be mounted only in B bay.
- FLS RCA inputs can be mounted in A and B bay.
- FLS XLR inputs can be mounted in A and B bay.

AUDIA FLIGHT THREE S SERIES

OVER 25 YEARS OF EXPERIENCE

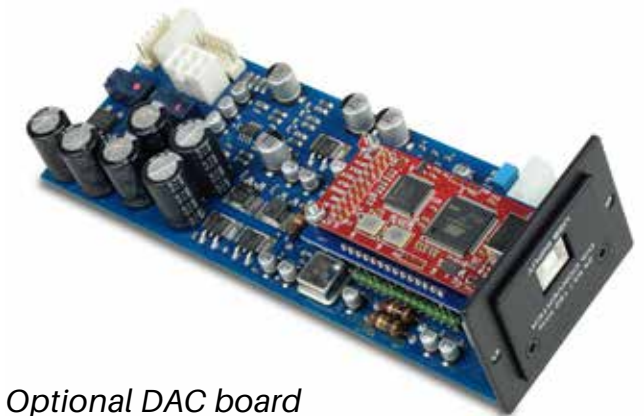

Over 25 years of experience designing cutting edge, high performance audio equipment has gone into our FL3S series. The result is, even by our high standards, incredible multi-faceted components! Using the experience with our Classic and Strumento Series, every detail, however minute, has been carefully thought through for the discriminating audio enthusiast and music lover. And, yet, the FL3S series offers an exceptionally good value and, like all Audia Flight products, it is made entirely in Italy.

FL THREE S

INTEGRATED STEREO AMPLIFIER

Starting with its elegant Italian exterior, the Flight Three S has solidly built casework with a thick aluminum (10 mm) front panel, positive-action metal push-button selectors, and a nicely-weighted pleasing to the touch aluminum volume knob, all expertly crafted and finely finished. In your hand you'll also find a compact, ergonomic remote control hewn from solid aluminum. A large, blue OLED display will keep your eyes informed about the input choice (each input can be named as you choose) and other feature selections as you engage them. Inside the Flight Three S's sophisticated electronic interior are a series of critical features that make this integrated amplifier perform well above other integrated amplifiers within its category. A high performance ALPS Blue potentiometer provides an accurate volume control at all settings. Eight power supplies are in charge of all amplification stages up to the driver transistor stage, with 13.200uF total capacitance available for the stabilized power supplies until the driver transistor section. Four high-current power supplies (72.000 uF) are then dedicated solely to the output driver stages. If that's not enough, all inputs feature sealed relays in an inert atmosphere and gold terminations! And, as following our philosophy for best sonic performance, the logic control section features its own toroidal transformer and is connect to the analog section via photo-couplers only. Driving your speakers are two 100 Watt amplifiers with a large 576VA toroidal audio transformer. In short, the Flight Three S is a dual mono design, with AudiaFlight's current feedback circuitry design, a sophisticated preamp section, and deep, well-controlled bass that brings

your loudspeakers and your music alive with a powerful, stunning sonic picture. Interfacing with your Flight Three S is also a pleasure, with input selection, volume control, and mute control (with a memory of the previous level) via front panel or remote control . The user can choose from four unbalanced analog inputs (one optionally phono), one balanced analog input, and even from an optional USB digital input. The optional USB 24bit 192KHz DAC board with its high grade, discreet circuitry achieves a remarkable musical experience from your digital files, while the optional pure analog MM/MC phono board (via analog Input 1) will bring your turntable, phono cartridges, and vinyl collection to vibrant life. Not surprisingly, then, the Flight Three S also has many standard features. A discreet, high-performance headphone amplifier designed to properly drive your headphones of choice. A bypass (or "direct") feature, selectable by remote control, allows the user to turn the Flight Three S into a power amplifier through any assigned analog input: you may then include the amplifier in a multi-channel system (such as a home theater) as the power amplifier for the main speakers, while still using the same speakers for reference quality two channel listening with stereo sources connected to the Flight Three S. Finally, rounding out this well thought out, highly flexible design out is a remote trigger input, monitor input, Record output, and an unbalanced Preamp output (with the ability to turn off the Flight Three S's internal amplifiers should you wish). Overall, the Flight Three S Integrated Amplifier is a pleasure to behold, to use, and to listen to with many sources and nearly any loudspeaker.

Optional DAC board

Optional MM/MC phono board

Technical data

Output power (Watts RMS) @ 8/4 ohm:
100/160 W

Amplifier stage gain: 26 dB

FL CD THREE S

CD PLAYER

Audia Flight FL CD Three S is perfect budget cd player for the lovers of really good sound. Starting with its elegant Italian exterior, the FL CD Three S has solidly built casework with a thick aluminum (10 mm) front panel. In your hand you'll also find a compact, ergonomic remote control hewn from solid aluminum. A large, blue OLED display will keep your eyes informed about all info you need. The unit is making use of a CD-Drive which is optimized for single speed playback and not just another computer drive. Also it uses the Sabre ES9026PRO 32-Bit Dacs. In addition to that Audia Flight is offering the choice of no less than seven Digital Filters and one of them is a modernized version of the legendary Audia filter in the original Flight CD1. Audia Flight is using two completely separate toroidal power supplies for the analog and digital circuitry. Unlike most manufacturers the analog output section of the DACs is fed from the analog power supply as well. The output section is, in Audia Flight style, A Class discrete current feedback technology and naturally the unit is fully balanced, so balanced and unbalanced analog output are available. It is also available a digital output. It can also be used as a digital converter using the special optional digital input card. It has five digital inputs (2x Opto, 1x AES/EBU, 1x Coax, 1x USB) is available and can easily be retrofitted at a later point in time. The USB input allows for 32/384 PCM and DSD 512 and thus makes the unit future proof as a standalone DAC. All digital inputs are insulated to prevent any noise from the digital sources. The analog output can be either fixed or variable.

Optional digital inputs card

Technical data

Frequency response: 0.5 Hz - 20 KHz \pm 0.1dB
 Upsampling: 32 bits, 768 KHz
 Dynamic Range: 126 dB
